

Chinese SkillSpan SOP-v4 Guidelines (A1, Part I: G1-G7)

Active protocol B.sop_v4.2.9; use the shortest complete source span.

Rule ID	Operational decision	Chinese example
G1	Use exactly four labels: L (language competence), K (knowledge), S (specific or operational skill), and T (transversal competence). Keep them distinct during annotation.	标注阶段只使用 L/K/S/T；任何二分类映射仅用于后续评测。
G2	Use flat, non-overlapping spans. Multiple mentions may occur in one sentence, but a character position belongs to at most one labeled span.	同句可有多个互不重叠的能力片段；同一字符位置最多属于一个标签跨度。
G3	Select an exact contiguous substring of the original sentence. Never rewrite a mention into a canonical form; store normalization separately.	原句：熟悉 Jenkins 标注：Jenkins[S]（保留原文拼写，不改为 Jenkins）。
G4	Use one boundary test: if meaning is unchanged, choose the shortest complete mention. Never cut through a word or identifier; two to eight characters/tokens is a preference, not a cap.	保留：支持服务[S] 禁止：支持服[S]；废止“一个动词一条长 S”。
G5	Exclude framing triggers such as 善于/熟悉/掌握/精通/了解/具备/有. Retain 会 only in colloquial transferable expressions; remove it before a tool or task skill.	熟悉 Python -> Python[S]；会聊天 -> 会聊天[T]；会使用Excel -> Excel[S]。
G6	Split coordinated expressions when each conjunct is independently meaningful. Keep one span only when splitting creates a fragment or changes an action into a bare outcome.	Python 与 Java -> Python[S]；Java[S] 优化曝光与转化率 -> 一条完整 S。
G7	Retain any head, object, or complement required to make the competency self-contained.	标注：协议栈配置[S]；端到端部署[S]；A/B测试设计[S]。
