

B.sop_v4.2.9 Conflict Scenarios & Resolution Rules

Context replaces the legacy global label priority.

Conflict type	Decision rule	Chinese example
K / S	Explicit theory, principles, or standards -> K; executable use, action, tool, or output -> S.	掌握SQL原理[K]；使用SQL[S]进行报表制作[S]
L / K	Natural-language proficiency/examination -> L; linguistic/domain theory or technical/professional certification -> K.	英语六级[L]；CET-6[L]；OCJP-Java认证[K]
L / S	Language proficiency itself -> L; an occupation-specific language task such as interpreting or technical-document translation -> S.	能用英语[L]；偶尔需口译[S]
L / T	Named natural-language proficiency -> L; communication or reporting that transfers across occupations -> T.	商务英语[L]；跨部门沟通能力[T]；英语沟通[T]
K / T	Explicit domain knowledge -> K; demonstrable cross-role awareness or competence -> T. A domain modifier does not create nested K.	信息安全知识[K]；安全意识[T]
S / T	A tool-, method-, or occupation-bound action is S; communication, reporting, or cross-role coordination is T unless a specific occupational object licenses S.	协调服务器资源[S]；跨部门协调[T]；客户汇报[T]
Potential overlap	Separate independent shortest-complete spans. Otherwise keep one predicate-licensed primary label; log same-boundary or nested alternatives outside Gold.	数据库开发能力 -> 按支配谓词选主标签；记录候选标签、结构类型和理由。
Crossing / unresolved	Crossing spans are prohibited. Re-select boundaries; if type remains unresolved after pairwise tests, use S and log adjudication_required.	记录：原句、候选跨度/标签、适用规则、S 暂定、仲裁人和理由。
